

Prevent 1,000 Maternal Deaths in the U.S. by 2018

The United States has the highest maternal mortality rate of any high resource country—and it's the only country outside of Afghanistan and Sudan where the rate is rising. The AIM Program is a national data-driven maternal safety and quality improvement initiative to reduce severe maternal morbidity by 100,000 events and prevent 1,000 maternal deaths in the U.S. by the end of 2018.

HealthStream has joined AIM's effort by offering all of its users access to AIM's eModules at no charge via the HealthStream Learning Center (HLC).

For more information on how to access the eModules through the HLC, **visit HealthStream.com/AIM**.
